## How Do Current Climate Change Policies Align with Biblical Prophecies About End Times Governance? Sixbert SANGWA • December 01, 2024

Climate change has become the defining narrative of the 21st century, but how much of it is rooted in truth, and

how much serves as a tool for a broader agenda? From the recent COP-29 conference to ongoing global policy shifts, this article seeks to unpack the climate change narrative, its alignment with globalist objectives, and its potential role in ushering in the prophesied New World Order (NWO). Is this issue simply about saving the planet, or does it conceal a darker agenda tied to control, economic restructuring, and spiritual deception? The climate change movement is built on the premise that anthropogenic (human-caused) emissions,

particularly carbon dioxide, are the primary drivers of catastrophic global warming. Over the years, international

platforms like the COP conferences have spearheaded initiatives to curb emissions, enforce sustainability measures, and promote "net-zero" policies. Advocates argue these policies are vital to preserving Earth's ecosystems. However, a closer examination of their rhetoric and methods reveals contradictions, flawed data, and policies that disproportionately burden the global poor while enriching elites.

Historical patterns reveal significant discrepancies in climate change theory. Prof. Ian Plimer points out that Earth experienced ice ages during periods of much higher atmospheric CO2—contrary to what might be

expected. Scientific analysis of ice core samples shows that temperature changes actually precede CO2 shifts, not vice versa (Plimer, 2024). This finding challenges the fundamental premise of climate alarmism: that human-produced CO2 emissions drive global warming.

Notable failed predictions include Al Gore's, 2009 forecast of an ice-free Arctic by 2016. Speaking at Leading the Charge through Earth's New Normal during the Annual Meeting at Davos 2023, Al Gore (2023) said: "by

600,000 Hiroshima-class atomic bombs exploding every single day on the earth. That's what's boiling the

oceans [....]creating these atmospheric rivers and rain bombs, sucking the moisture out of the land and

creating drought, causing waves of climate refugees predicted to reach 1 billion this century." Similarly questionable are Bill Nye's 2019 claim that "the planet is on fire" and UN Secretary-General António Guterres" dire warnings at COP-29 in 2024—examples of fear-based rhetoric used to mobilize public support. The recurring revision of climate "tipping points" raises doubts about these claims' scientific validity and suggests they may serve political and economic agendas rather than environmental concerns.

The Contradictions and Failures of the Climate Narrative

The climate agenda contains notable contradictions. At COP-29, UN Secretary-General António Guterres emphasized climate disasters, blamed human activity, and demanded \$40 billion annually for "adaptation"

finance" by 2025 (Guterres, 2024). Yet while leaders criticized citizens' carbon footprints, many conference

cause the problem, and the poor pay the price," their proposed solutions burden the middle and lower classes

## attendees arrived in private jets—a mode of travel that produces far more carbon emissions per person than commercial flights. This hypocrisy highlights the inequity of these policies. While UN narratives claim the "rich"

with taxes and surveillance while leaving elite lifestyles unchanged.

the atmospheric concentration to boost plant growth and crop yields.

The scientific basis for climate policies also faces substantial scrutiny. According to Professor Ian Plimer (2024) and supported by Carson (2024), historical geological evidence shows that today's temperatures are not unprecedented. The Medieval Warm Period, documented in the IPCC's 1992 report, exceeded current temperatures. However, later IPCC reports, particularly the 1996 version, introduced the controversial "hockey stick" graph that appeared to erase both the Medieval Warm Period and Little Ice Age, creating a flattened historical temperature record with a sharp modern increase. This revision has been criticized as potentially manipulating historical data to support a particular narrative.

Dr. William Happer's research reveals another contradiction in the climate narrative regarding CO2. According

This scientific evidence shows how CO2 has been politically weaponized. As Happer explains, CO2's demonization began when "green politicians" like Al Gore saw an opportunity to "make a buck by demonizing CO2." The benefits of CO2 are clear: it has contributed to approximately 45% of increased wheat yields, and satellite imagery shows significant global greening, especially in arid regions like Western Australia.

Ironically, aggressive carbon reduction policies might pose a greater threat to environmental stability than CO2

itself. Reducing atmospheric CO2 could trigger ecosystem collapse and plant die-offs—outcomes that would

likely be blamed on climate change, fueling a cycle of increasingly restrictive policies based on flawed

assumptions. Looking at this chart, the data appears to confirm this. What's concerning is that if efforts to

to Happer (2018), we are experiencing a "carbon dioxide famine" compared to historical levels. Plants flourish

with higher CO2 concentrations—greenhouse operators deliberately increase CO2 levels to two to four times

drastically reduce atmospheric carbon succeed, it could lead to collapsing ecosystems and dying plant life. The likely response? They'll blame climate change. It's creating a self-fulfilling prophecy—their policies may cause environmental deterioration, which they'll then use to argue that we need even stricter policies. It's a devious cycle.

These findings align with research supporting alternative climate perspectives. Doug LaMalfa's (2023) analysis challenges mainstream climate narratives. Historical temperature patterns and CO2 measurements across

geological periods reveal a more complex climate history than commonly presented, contradicting claims of

Fear is the central tool used to promote climate policies. From engineered floods and droughts, cyclones and hurricanes to alleged food shortages, every crisis is linked to human activity and framed as solvable only through drastic changes in governance, economy, and daily life. Such narratives align suspiciously well with goals outlined in globalist frameworks like **Agenda 2030** and the **Paris Agreement**, which call for sweeping changes in consumption, energy use, and economic behavior.

enriching elites. One critical aspect of this agenda is the war on food, as evidenced by World Bank's "Recipe for

COP-29 exemplified how fear is weaponized to advance policies that restrict personal freedoms while

## a Livable Planet" report. The irony at COP-29 was striking: while delegates preached about eliminating meat

The Role of Fear in Centralizing Food Control

unprecedented modern warming...

consumption, they themselves crowded around the meat buffets. Morano (2024) noted how two meat-serving stations had long lines, while the vegan-only restaurant stood nearly empty. Notably, none of the UN delegates seemed interested in sampling the insect-based foods they promote.

During COP-29, Jeroom Remmers (2024) emphasized the push to transition away from animal protein consumption: "The World Bank published recently reports urging the high-income countries but also the

middle-income countries to start policies on diet shifts away from meat and to tax meat and dairy." He further

justified these measures by claiming that "meat and dairy this is costing like 20% of all greenhouse gas

emissions" and arguing that producers "should pay for the damage they cause."

This rhetoric was echoed by WHO Director-General Dr. Tedros in multiple statements. In 2023, during COP-28, he declared: "Our food systems are harming the health of people and the planet. Food systems contribute to over 30% of greenhouse gas emissions and account for almost one-third of the global burden of disease transforming food systems is therefore essential by shifting towards healthier diversified and more plant-based diets." He further intensified this message in 2024, stating: "climate change is the defining health challenge of our time it affects every dimension of health the food we eat the air we breathe the water we drink and the stability of health systems on which we rely, the climate crisis is escalating the severity of

extreme weather events increasing food insecurity exacerbating respiratory disease and fueling the spread of

infectious disease" (Tedros, 2024). The language is carefully chosen - citizens are now labeled as "polluters"

who pose a danger to their world, setting the stage for punitive measures against individuals. These policies

while corporate-controlled mega-farms monopolize the industry, exacerbating inequality and dependency.

The proposed solutions betray a focus on surveillance and control rather than meaningful environmental

disproportionately harm small farmers, forcing many out of business under the weight of taxes and regulations,

action. For instance, programmable money tied to personal carbon limits could restrict individual purchases of fuel or food, creating a society governed by social credit scores. These measures echo systems already in place in China, where citizens are penalized for exceeding government-imposed limits on behavior.

Guterres' remarks at COP-29 illustrated this fear-based approach: "The sound you hear is the ticking clock...every economy will face far greater fury unless emissions plummet." While wrapped in environmental concern, these policies create infrastructure for digital monitoring and control systems such as Central Bank Digital Currencies (CBDCs), social credit systems, and personal carbon limits. These mechanisms could restrict individual freedoms under the pretext of ensuring climate compliance.

Resistance and Hope

Despite the dark trajectory, resistance to the climate agenda is growing. Ordinary citizens, scientists, and politicians are exposing the flaws and manipulations inherent in the climate narrative. For instance, at a recent climate conference in Prague, the Climate Intelligence Group (CLINTEL) made significant declarations,

Sun rather than CO2 is the primary driver of global temperature changes, and that climate models are inherently unreliable for predicting future warming. They also emphasized that the proposed "Net zero by 2050" goals are not only unattainable due to insufficient techno-metal resources but would also cost an estimated \$2,000 trillion globally (The Clintel Foundation, 2024).

The Sinister Agenda Behind Climate Policies

The policies promoted at COP-29 extend far beyond environmentalism into a comprehensive system of control. They openly discuss plans to regulate population through carbon emission controls, but the agenda becomes more concerning as it increasingly merges with pandemic preparedness and biosurveillance. Their doomsday predictions now deliberately link climate change to future pandemic threats (Vidal, 2023;

Georgetown University, 2024). This strategy leverages COVID-era anxiety to normalize increasingly invasive

The integration of climate and public health narratives reveals an ambitious technological agenda. WHO

Director-General Tedros Adhanom's declaration at COP-29 that "the climate crisis is a health crisis" sets the

stage for what Klaus Schwab describes as the Fourth Industrial Revolution - one that "doesn't change what we

describes as "an ecosystem... of devices connected to the internet that contain software and that either collect

are doing but it changes us." This transformation involves the Internet of Bodies (IoB), which Mary Lee (2024)

personal health data about you or can alter the body's function." As Yuval Harari (2023) warned of the elites'

drive to hack humans—whom he considered useless (2020)—through such a "technocratic scheme... that

convinces people to accept and legitimize total biometric surveillance." The IoB connects to the Internet of

Things and ultimately the Internet of Everything, creating a comprehensive surveillance infrastructure that can

monitor individuals down to the cellular level. This system enables unprecedented access to not just people's

concluding that the "climate emergency is over." Their comprehensive analysis, as summarized by Willem

(2024), covered 19 key points, including findings that CO2 increases have been beneficial to humanity, that the

Biblical Prophecies and the Antichrist's System

The Bible prophesies a coming global system under the Antichrist's control, where economic transactions will be strictly regulated (Revelation 13:16-17). This system would require a centralized infrastructure to monitor and enforce worldwide compliance—which bears striking similarities to the infrastructure being developed through current climate initiatives.

Daniel 7:23 speaks of a "fourth kingdom" that will consume the whole earth, representing a totalitarian global empire. The modern framework of climate policies, backed by international agreements and sophisticated surveillance technologies, shows remarkable parallels to these prophecies. The emerging Internet of Bodies (loB), which encompasses interconnected devices that track human activity and health, may foreshadow the mark of the beast system.

Yet biblical prophecy also brings hope. While Jesus cautioned that deception would mark the end times (Matthew 24:24), He assured that truth would ultimately triumph. As Christians, we must test the spirits (1 John

The climate agenda, when examined critically, reveals its true nature: a tool for centralizing power, restricting

environmental stewardship is important, the Bible reminds us that ultimate dominion belongs to God, not man

The rapid advancement of these global control systems, combined with increasing persecution of Christians,

moral decline worldwide, and systematic efforts to silence biblical truth through censorship and intimidation,

suggests we are approaching the time of the Rapture. The engineered global crises, including manufactured

the parable of the wise and foolish virgins (Matthew 25:1-13), we must remain vigilant and spiritually prepared,

As we navigate these turbulent times, let us rely on Scripture and truth to discern the real agenda behind these

freedoms, and advancing a globalist system that mirrors the prophesied rule of the Antichrist. While

## famines, orchestrated conflicts, and deliberate economic instability, all align with Jesus' warnings about the signs of the end times. The coordinated push to suppress dissenting voices while promoting a unified global narrative aligns with prophetic warnings about the preparation for the Antichrist's reign. Just as Jesus taught in

4:1) and remain steadfast against deception.
